Presenter: Dr Gav Schneider

President ISRM ANZ

RMIA Risk Leader of the Year 2023 / Risk Consultant of the Year 2019

Session Title:

Presilience, Leadership and High Performance

Abstract:

Presilience is much more than simply being reliable and ensuring business continuity in case a negative event happens—it's about high performance and outcomes that make us better than we were before. It's about constant learning and adaption to seize opportunity, not simply recovering from a negative event. There is a formula to follow and skills to develop that will see businesses and business leaders emerge as being able to perform well during business as usual but thrive in disruption. Technical experts need to leverage the human capability for project and risk success – this requires a new way of thinking that moves past risk viewed only as negative to a balanced threat and opportunity centric view.

In this session you will learn:

- Why presilience is the key skill set required to thrive in the new normal.
 - Why leadership starts with an internal narrative.
 - An understanding of the whole of person model in practice.
 - Why understanding how we make decisions is crucial to high performance.
 - The journey from compliance to resilience.
 - Why agility and resilience are crucial for success.
-
- How to build a mindset for presilience
